Concept of Jupiter project

The concept is an idea or notion that forms the backbone and foundation of a project and one that drives it forward. It becomes the force and the identity behind a project's progress, which is consistently considered throughout the stages of its development.

The native characteristics of the project area were our sources of inspiration in design, particularly the village of Masouleh where the roofs are stacked in different forms, and its old houses overlying one another in different shapes, since the ancient times.

The way of lifestyle of people in ancient times can inspire contemporary people to treasure their original culture.

GROUND FLOOR

LOBBY DESIGN

The lobby space includes foyers, entries to halls, and security screening areas at or near the entrance to a building and are meant to welcome and direct residents and visitors, control access, and provide exit ways from the building. This space is often designed with both secure and non-secure areas.

Building lobbies often serve as the public face of building interiors and are becoming more interactive spaces that provide an enhanced client experience.

From the right lighting scheme to the efficiency of the layout, we are incorporating the essentials of residential lobby design.

Two store openings on the ground floor facing the street for the greater comfort of the residents

The Form

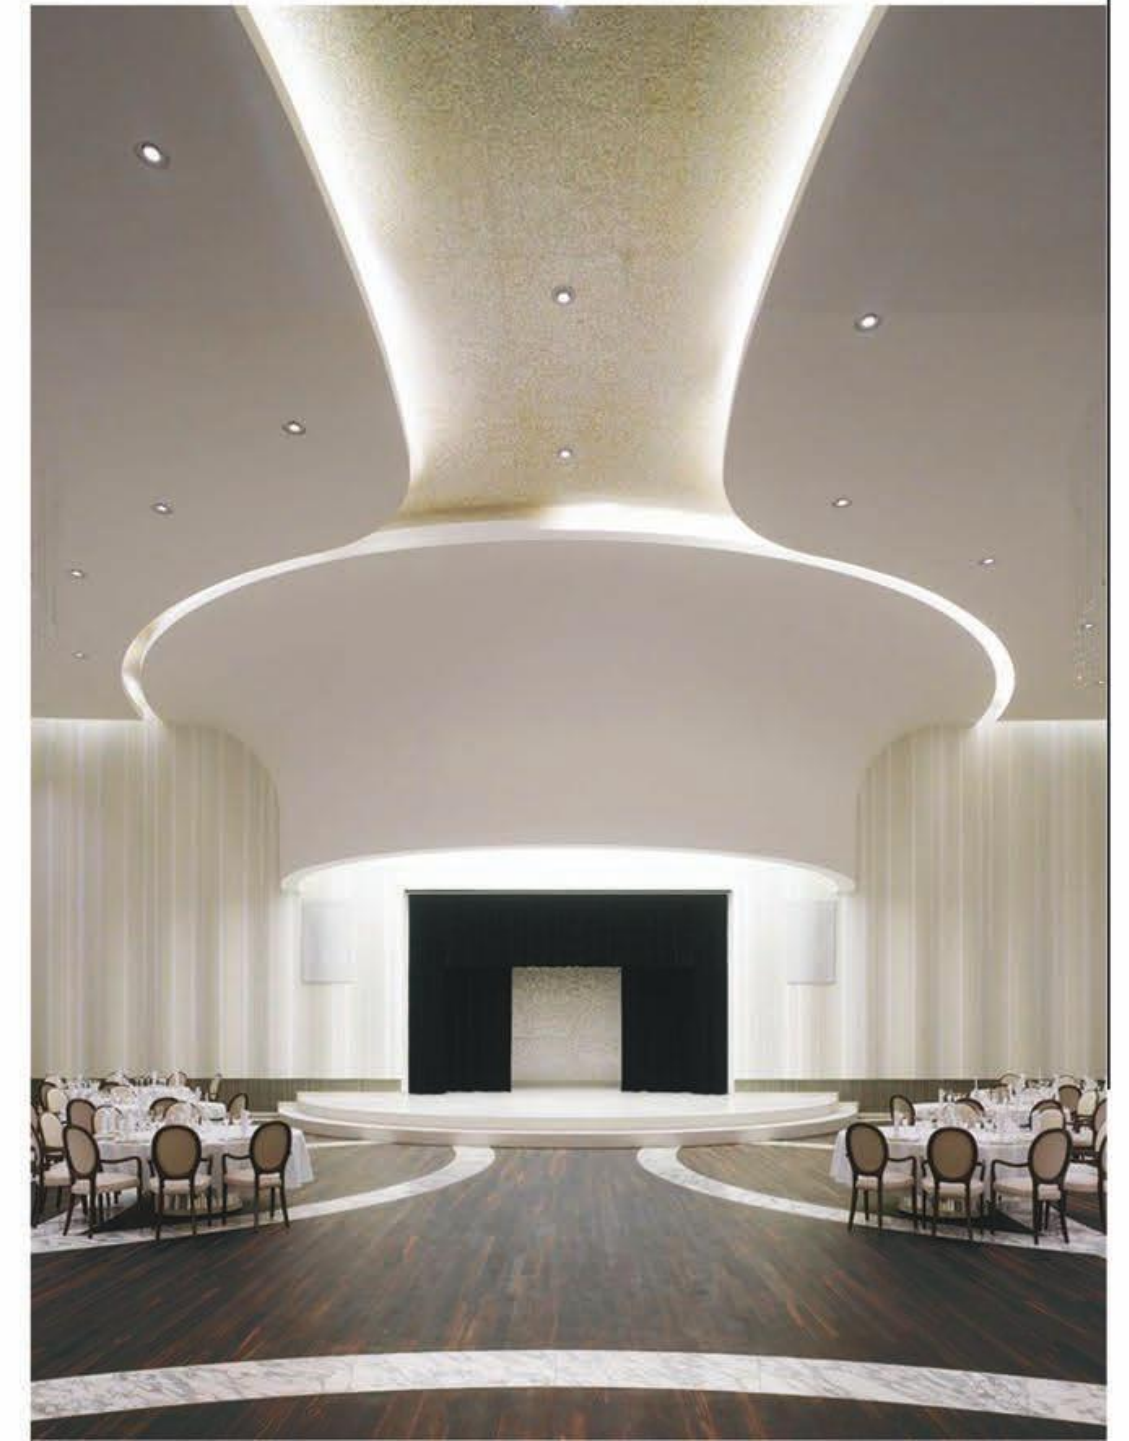

The building experience was designed to create the idea of breaking down barriers and fostering collaboration, even between buildings and their neighborhood and society at large.

We believe that quality design paired with sustainable architecture results in holistic solutions that meet our clients' priorities and contribute to a livable and sustainable environment. Over the last number of years we have proven our strength in delivering outstanding architectural projects that combine creativity, scientific knowledge, technical innovation, and sustainability.
